Drivers for energy certificates procurement

Consumers Incentives

1 **Renewable Energy Generation**
- Accounts for renewable claims

2 **Transparency Tracking System**
- Ensures double counting prevention

3 **Positive Social Image**
- Strengthens environmental commitments

Products that make environmental, social, and governance-related claims have achieved disproportionate growth.

Retail sales growth, US, CAGR 2018–22, %

Drivers for energy certificates procurement

Supply Chain

“ The company said it will require its supply chain partners to report their progress on these goals and specifically Scope 1 and Scope 2 emissions reductions related to Apple production. ”

According to Apple, more than 200 of its suppliers representing more than 70 percent of its direct manufacturing spend have already committed to using clean power such as wind and solar for the production of all its products. To date, its suppliers are said to have brought more than 10GW of clean power online around the world

These manufacturing partners include companies Corning Incorporated, Nitto Denko Corporation, SK Hynix, STMicroelectronics, TSMC and Yuto. Apple said they have all committed to power the production of Apple products with 100 percent renewable energy.

1

Contractual Obligations

- Complies with supplier’s renewable energy mandates

2

Risk Management

- Increases capability building in relation to climate policies

3

Customer Demands

- Upholds climate disclosures criteria

Drivers for energy certificates procurement

Competitors

1

Brand Differentiation

- Creates competitive advantage over the peers

2

Corporate Responsibility

- Attracts environmentally-conscious clients & stakeholders

3

Early Participation

- Secures a stronger market position
